Unit 8. Explore Reactive Programming -2

Assignment 1: Build a Contact Management App using Kotlin Flow and Advanced Operators

Main :

Design the user interface for the contact management app. The interface should include a contact list, an "Add Contact" button, a search field, and options for editing/deleting contacts.

Use Kotlin Flow to perform the following tasks:

- Listen for "Add Contact" events and add new contacts to the contact list.
- Listen for "Edit Contact" events and update contact information in the contact list.
- Listen for "Delete Contact" events and remove contacts from the contact list.
- Search for contacts in the list based on name or phone number.
- Use a simple database (e.g., SQLite) to store contact information.

Advanced: Use the combine operator to combine multiple Flows into one Flow to display contact information in the address book in a customized way (e.g., sorting or grouping). - Optional

Objectives:

- Know how to implement Kotlin Flow

Technical Requirements:

- Must use Kotlin Flow
